

How Big Tech Elites And The World People Can Be Enslaved By China Ccp Or

Over the past few decades, China has rapidly emerged as one of the world's most influential nations, both economically and technologically. With its vast population and ambitious goals, China has made significant strides in various industries. However, there is growing concern that China's actions, particularly those related to its government institution, the Chinese Communist Party (CCP), pose a threat to the freedom and autonomy of not only its own citizens but also people around the globe.

While the CCP's authoritarian regime has long been criticized for its human rights abuses and lack of political freedoms, recent developments have shed light on another dimension of its power: its influence over big tech elites and its potential to enslave the world population through technological manipulation.

Big tech companies, including giants such as Google, Facebook, and Apple, have become dominant players in our daily lives. Their platforms and services have revolutionized industries and connected people like never before. However, their partnerships and business interests in China have raised eyebrows among critics, who argue that such collaborations come at a cost to individual freedom and privacy.

The Great Reset: How Big Tech Elites and the World's People Can Be Enslaved by China CCP or

China's strict censorship laws and surveillance systems are well-known, enabling the CCP to keep a close eye on its citizens, limiting their access to information and curbing dissent. By participating in joint ventures or complying with Chinese regulations, these tech elites inadvertently become complicit in the suppression of free speech and expression.

Moreover, China's pursuit of technological advancement through projects such as its social credit system, facial recognition software, and artificial intelligence poses a daunting concern for global citizens. While these technologies may offer conveniences and increased efficiency, they also create the potential for widespread surveillance, control, and manipulation.

As tech elites amass wealth and influence, their interests become intertwined with those of the CCP. The lure of China's massive market and the potential for exponential growth often outweigh ethical concerns and the potential consequences of supporting a regime known for its human rights abuses.

Furthermore, with many big tech companies based in Western democracies, there are concerns that their collaborations with China give the CCP the power to

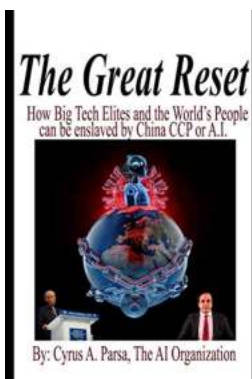

manipulate and control information, shaping narratives and influencing public discourse on a global scale.

China's push for dominance in the realm of technology extends beyond its borders. Through its Belt and Road Initiative (BRI) and other strategic investments, China is expanding its influence globally, with key infrastructure projects in various countries. This expansion provides the CCP with leverage and control over vital aspects of these countries' economies and societies, furthering its potential to enslave not only its own citizens but also those of other nations.

While it may be tempting to dismiss these concerns as conspiracy theories or exaggerations, it is crucial to recognize the potential dangers that arise from a collusion between big tech elites and an authoritarian regime like China's. The combination of advanced technologies and unchecked power can result in a loss of individual freedoms, privacy, and the ability to challenge oppressive systems.

As consumers and global citizens, it is essential for us to remain vigilant and informed about the actions and alliances of big tech companies and their potential implications. Furthermore, governments and international organizations must work towards establishing regulations and standards that safeguard individual privacy, freedom of expression, and the integrity of democratic societies.

In , the influence and power of China's CCP cannot be underestimated. By collaborating with big tech elites and expanding its reach globally, the CCP has the potential to enslave not only its own citizens but also those of other nations. It is up to us as individuals to educate ourselves, hold companies accountable, and demand ethical practices that prioritize the freedom and autonomy of individuals over profits and convenience.

This book is meant to be a neutral analysis and depiction of threats to world leaders, big tech elites, Silicon Valley, conservatives, liberals, WEF, nation states, the intelligence community, and the common person. This includes religious people and atheists. It is not against WEF, Silicon Valley, right, or left. Rather, I attempt to write on everyone's behalf.

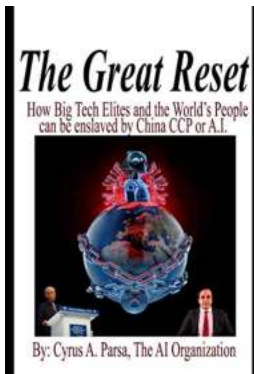

I will describe the Great Reset (4th industrial revolution) more in detail from the macro perspective with short and concise summary paragraphs of each major global component as it relates to AI, smart cities, and the geo-political challenges that exist.

I will go a lot further and beyond what the World Economic Forum has published and is disclosing to the public with Mr. Klaus Schwab's own book, COVID 19: The Great Reset, which shined may be 5% of what I disclosed in my previous book Artificial Intelligence Dangers to Humanity, and what I will be disclosing here, in this book.

I was the only human being in the world that knew the timing and worked hard to accurately warn and predict that the world's people were in impending danger from a Bioweapon or disease (Covid 19, AKA CCP Virus) from China CCP in 2019, leading to conflicts with lockdown, famines, AI enslavement, and the entire Great Reset. Prior to and more accurate than Bill Gates, Elon Musk, WEF, intelligence agencies, or any government.

Methods included Secret Service briefs, Fmr. CIA Covert Ops Director reports, published books Artificial Intelligence Dangers to Humanity, and numerous attempts to provide solutions to save lives and help governments, the intelligence community, media, and families. The intention has always been altruistic, and to help my fellow citizen and their families from harm. I hope now, this book, my efforts, and The AI Organization, are taken more seriously and supported.
