Root words: These are the core elements of a term and often describe a body part or an action. For example, "cardi-" refers to the heart, and "derm-" relates to the skin.

Prefixes: These are added at the beginning of a root word to modify its meaning. For instance, "hypo-" means under or below, so "hypotension" refers to low blood pressure.

Suffixes: These are added at the end of a root word to alter its meaning. For example, "itis" denotes inflammation, so "arthritis" refers to joint inflammation.
