The hilarious madness at Franken-Sci High continues in this second book in a wacky series created with The Jim Henson Company.

Franken-Sci High is the only school in the world for aspiring mad scientists and it's located on a craggy island in the Bermuda Triangle, of course! While some mad scientists are power-hungry maniacs, the school was founded in 1536 as a refuge for generations of brilliant—and sometimes eccentric—young minds. Students are encouraged to use their brainpower for good, but the teachers accept that some kids will want to take over the world...and the school cafeteria.

In the second book in the Franken-Sci High series, Monsters Among Us, Newton Warp's friends notice he's being followed around by a strange new professor, Dr. Flubitus, but have no idea why. Newton wonders if it has something to do with the barcode on his foot. He doesn't have much time to dwell on it, though, because soon there are reports of a giant monster loose on campus! Shelly assumes a school for mad scientists would have top-notch security against monsters, nosy tourists, and other invaders, but soon she and her friends Newton and Theremin discover a gaping loophole in the system. If a marauding monster can find its way

to the school's secret location in the Bermuda Triangle and figure out how to open a portal to the campus, anyone else could get in, too! Then Shelly finds out she might be the reason the monster is there in the first place...
