Preservation Efforts

In recent years, efforts have been made to preserve the natural beauty of Faraway Island and protect its delicate ecosystem. Local organizations and eco-conscious travelers have joined forces to promote sustainable tourism practices and raise awareness about the importance of preserving this precious paradise for generations to come.

WATER CONSERVATION

The Biofeed[®] ACT[™] base additive contains natural chelates which buffer and combine with harmful salt to make it soluble. The salt toxicity reduces as it becomes easier for salt to leach away from the root zone. The removal of excess salt loosens the soil structure to allow better movement of water. Better soil structure reduces water usage in several ways while also creating healthier, more beautiful turf! Using Biofeed[®] fertilizers helps your water permeate to the roots in your soil, helping you conserve water, and cut watering costs.

- Eliminate water pooling and runoff. Either of these is a sign your soil is not absorbing water as it should. Irrigation water that does not penetrate the soil surface is wasted.
- Increase water holding capacity. The deeper water penetrates the less likely it will evaporate away. More efficient soil water holding capacity reduces how much and how often you irrigate.
- Root Length and Root Density. Water is taken into plants through the leaves and roots. A loosened soil particle structure allows for deeper root growth to address its increased root density. This means the roots have more surface area through which to absorb water. Less water is needed as it becomes easier for the plant to acquire the water it needs.

POWERFUL AND ECO-FRIENDLY

And if the dramatic results and increased soil quality are not enough, Biofeed[®] products are eco-friendly and free of the following harmful ingredients:

- No harmful residues that accumulate and suppress soil fertility
- No NPTA (N-Phenylacetamide/acetate)
- No mixed heavy components (L-cysteine)
- No chemically derived additives
- No petroleum hydrocarbons
- No toxic elements
- No sulfur acid
- No sulfuric acid

SUPPORTS CARBON SEQUESTRATION

Biofeed[®] Solutions, Inc. is proud to be doing our part for the climate by creating eco-friendly products that nourish and stimulate the same soil microbial systems to multiply and function optimally, creating a live soil environment that not only is proven to produce thriving turf but also creating better conditions for soil to absorb carbon dioxide out of the atmosphere to be properly stored and used below ground where nature intended.

Two Jewish sisters leave Austria during WWII/Holocaust and find refuge in Sweden.

It's the summer of 1939. Two Jewish sisters from Vienna—12-year-old Stephe Steiner and 8-year-old Nellie—are sent to Sweden to escape the Nazis. They expect to stay there six months, until their parents can flee to Amsterdam; then all four will go to America. But as the world war intensifies, the girls remain, each with her own host family, on a rugged island off the western coast of Sweden.

Nellie quickly settles in to her new surroundings. She's happy with her foster family and soon favors the Swedish language over her native German. Not so for Stephe, who finds it hard to adapt; she feels stranded at the end of the world, with a foster mother who's as cold and unforgiving as the island itself. Her main worry, though, is her parents—and whether she will ever see them again.
